S@feOffice

OPTIMALLY MANAGE YOUR EMPLOYEE'S SAFE RETURN TO THE OFFICE.

FOR MANAGERS:

Model and manage workspaces, office maps, agendas, staff lists, etc., with integrated APIs allowing them to easily re-use the data.

An AI assisted capability allows to design and manage staff traffic and flows, or to optimize the location of tables and seats in open spaces and cafeteria.

FOR EMPLOYEES:

Easily receive information about authorities and relevant organizations, organize meeting and workshops, book working slots at the office, reserve coffee/smoke breaks or a seat at cafeteria respecting social distancing rules via desktop or mobile application.

AWARD WINNING:

S@FE Office won the Luxembourg « Think About Tomorrow - post Crisis » Award during Hack the Crisis.

S@fe Office: "Think about tomorrow"

It is time for the European economy to restart. Public services and private companies are faced with the need to bring their staff back to premises while ensuring the safety of everyone and respecting the continuously changing guidelines. For management teams, it's a complex and sensitive mission. Nobody is prepared for such a challenge.

Office managers are confronted with ongoing changes in governmental, national & multi-national, and sectorial health requirements and recommendations. They need to be able to keep track of changing parameters, communicate in real time with staff and teams, be able to decide and be ready at any time to re-lock premises for security reasons.

In this context, the S@fe Office solution will support you and your teams with a secure and smooth transition from the safety of home-working to compliant and safe office premises.

S@fe Office is composed of an application, a guiding pack and workshops to guide you and your teams through the transition. It allows public services and private companies to manage the return to operations by allowing staff to get real time information, report on their activity and planning, easily book slots at the office, among others via desktop or mobile app.

Our approach is composed of two steps:

1. Understanding your needs and adapting them according to specific regulations. This step allows us to consider and model different parameters such as national and sector guidance, office maps, open spaces, corridors, staff lists, catering facilities, cleaning services, among others.

2. Modulating the application according to the daily functioning of your company to offer you and employees the correct tools.

S@fe Office uses the capabilities of the Office 365 Suite and it supports GDPR and ISO27701 data protection and security requirements. All of that in a user-friendly way and with a familiar interface.

About Sopra Steria

Sopra Steria, European leader of digital transformation, proposes one of the most complete end-to-end solution offerings available on the market: consultancy, systems integration, software development, infrastructure management and business process services.
